Small start for PLANT DX

People talk about plant DX (digital transformation), but have you ever wondered just how to get DX going? We'd like to propose a small start to DX with a low-cost, easy application software that focuses on equipment and information management, a common concern in manufacturing plants regardless of the industry.

Information sharing and localization of knowledge at plants
Having problems with the following?
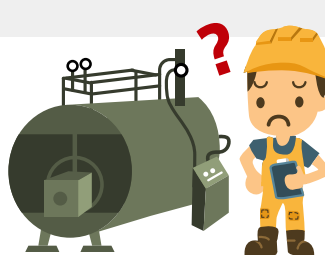

Accidents

How can I reduce accidents?! How do I share information on countermeasures?

Equipment and preventative maintenance

What information do I have on past equipment trouble? How about on repairs?

Assets

Where are my fixed assets? Weren't they moved?!

Education

I can't pass on proper engineering and maintenance methods well⋯

I can't share information well, and localized knowledge makes work efficiency worse⋯

You need a centralized information repository and visualization to promote information sharing

The answer is a DX small start
using 360°camera imaging!

See the reverse for more information

360° spatial solutions
KIMOTO
360

360° image collection application software
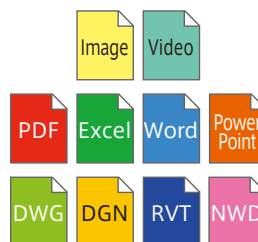

KIMOTO360 EDITOR & VIEWER

Features

360° View

Links multiple 360° images to allow you to check on things as if you were there.

Hyperlink function

You can embed characters and URL/PC drive hyperlinks in the 360° image.

https://www.kimoto.co.jp/

Provide attribute data

Image Video
PDF Excel Word Power Point
DWG DGN RVT NWD

You can provide various file formats as attributes in the 360° image.

Offline capabilities

Software is offline, so it can be operated in areas with no internet access.

Use KIMOTO 360 EDITOR & VIEWER to revolutionize your workflow!

Previously

Equipment trouble

Repair history

Asset management

Industrial accident information

Information is stored haphazardly on the server, and can't be shared well. Much of it is Excel data, so if the character information and equipment name/place don't match it creates localized knowledge, and work efficiency worsens.

After implementation

Eliminates localized knowledge

Better work efficiency

Provides attribute data on trouble, repair history, asset management, industrial accident information, maintenance manuals, etc. in the 360° image for better visualization. The VIEWER can be used to share information so that anyone can view it when needed. Eliminates localized knowledge, and greatly increases work efficiency!

KIMOTO360 EDITOR Software price

List price

※Price is per license
※Uses .exe file format, so no installation necessary.
※Uses Windows10 Pro 64bit.

● We also take orders for 360° image work using KIMOTO360 EDITOR.
● KIMOTO360 VIEWER is free to use

※Product specifications are subject to change without notice.
